MEMORANDUM TO THE FILES

RE: SI and H Experimentation, 19 January 1954

A On 19 January 1954, SI and H Experimentation and research was carried on in Building 13, Room 20 by Messrs. [redacted] and [redacted] using the following subjects: Misses [redacted] and [redacted]

Only routine slow induction techniques were tried during the evening and an intensive effort was made to obtain as great a depth as possible from all individuals present. In this it would appear that the efforts were extremely successful since all present obtained greater depth than they had previously been able to reach.

Three separate inductions were run and a few simple PHs, and Tests were made. The main effort was concentrated on obtaining a greater depth.
